

Abstract

The invention relates to a mixture for use as wound dressing, which comprises:

- a) paraffins complying with DAB and/or synthetic waxes selected from the group consisting of montan waxes, petroleum waxes, Fischer-Tropsch waxes, polyolefin waxes, petrolatum, wax alcohols, and oxidates of the aforementioned substances;
- b) at least one metal hydroxide.

The mixture is stable on prolonged storage at room temperature and promotes collagen regeneration in vivo in cases of bone trauma.
